

## CSV output

### Example of output csv file for Addresses

Typical output Automatic process

Please note when multiple address candidates (count > 1) are returned the input address and comment field (showing candidate count) are found at bottom of output file. These multiple address should be processed interactively or as individual request. Input address is the first two fields of output csv (shown in red for clarity)

*Address to Validate, LOCALITY, Primary Address, Locality, Postcode, Local Government*

**Gayndah Mundebbera Rd,Glenrae,,,,,,,,,,,,,Request discarded**

## Note

The above csv file has been reformatted to explain output.

1. Header line (shown in italics) is returned explaining what fields are contained between comas.
2. Input address is returned at the beginning of each record (shown in red).
3. Addresses that return more than 500 candidates will be automatically "Discarded" as "Too many results". Manually discarded addresses show "Request discarded"
4. The returned or selected address follows the input address.
  - a. Primary Address – only primary addresses are returned. Some addresses in database are secondary or "alias" addresses to the primary address.
  - b. Locality - Suburb
  - c. Local Government Name – Local Authority responsible for the address
  - d. LotNumber – Part of property description
  - e. PlanNumber – Part of property description
  - f. Longitude – Longitude of property address centroid
  - g. Latitude – Latitude of property address centroid (always negative for Queensland)
  - h. Geocode Type – The type of geocode that the address is tied to. "PC" (Parcel Centroid), "BC" (Building Centroid), "PAP" (Property Access Point) etc
  - i. Confidence – Confidence of result (see full explanation list of confidences in Batch Geocoder User Guide)
  - j. Full Address – a single line address made up of primary address, Locality and postcode
  - k. Complex-Building – The name of Building or complex the address is linked to
  - l. Comment – number of candidates available for selection, "request discarded ", "too many results" or other error conditions.

csv files can be opened in any spreadsheet for sorting purposes.

## Example of output csv file for LotPlan

### *Typical output Automatic process.*

Please note when multiple addresses are located on a Lot Plan (Bold Italicised for clarity). Also be aware of the different addressing types of geocode being returned PC parcel centroid, BC building centroid etc. In Lot Plan auto process only if a land parcel has multiple addresses with only 1 “PC”, it will be shown with a comment “Please Review....”

*Lot to Validate,Plan,Primary Address,Locality,Postcode,Local Government*

*Name,LotNumber,PlanNumber,Longitude,Latitude,GeocodeType,Confidence,FullAddress,Complex-Building Name,Comment*

**63,SP184386**,867 MAIN ST,WOOLLOONGABBA,4102,BRISBANE CITY,63,SP184386,153.03426249,-27.48511136,PC,100,867 MAIN ST WOOLLOONGABBA QLD 4102,,***Please review. There are 2 additional addresses found for this LotPlan. Multiple locations found with geocode type of Parcel Centroid.***

**2,WL15**,Lot 2/WL15 ,UPPER CORNISH CREEK,,BARCALDINE REGIONAL,2,WL15,145.20904434,-21.80617538,PC,100,Lot 2/WL15 UPPER CORNISH CREEK QLD,, (NOTE this is a valid Lot Plan but it has no address linked to it. The service can only returns the Lot/Plan, Locality and Local Authorityas in lieu of address)

**6,SP246762**,930 GYMPIE RD,CHERMSIDE,4032,BRISBANE CITY,6,SP246762,153.02755684,-27.38169682,PC,100,930 GYMPIE RD CHERMSIDE QLD 4032,(WHELLER ON THE PARK),***Please review. There are 342 additional addresses found for this LotPlan. Multiple locations found with mixed geocode type of Parcel and Building Centroid.***

**1,RP1**,Lot 1/RP1 KLUGH ST,ADAVALE,4474,QUILPIE SHIRE,1,RP1,144.60079671,-25.9105354,PC,100,Lot 1/RP1 KLUGH ST ADAVALE QLD 4474,,

***Typical output using Interactive process to select one of the candidate addresses linked to the land parcel.*** Parcel below were identified in Auto process as having more than 1 candidate address on land parcel.

Selection made as processing occurs. Addresses can be better identified as a single address using the Geocode type “PC” or “BC”

*Lot to Validate,Plan,Primary Address,Locality,Postcode,Local Government*

## KML output

The kml file can be saved and opened in Google Earth application. . Addresses with fields can be viewed over imagery. Only address records with valid response are output to kml file.

The kml file can also be viewed as an additional layer in QldGlobe <https://qldglobe.information.qld.gov.au>. For viewing these files please refer to qldglobe help documents
